ABOUT US

PEOPLE LOVE FACTORY

A Brief Story About The Company

People Love Factory Engineering Group was established in 2007. We provide comprehensive turnkey services for industrial factory design, construction, and systems engineering, covering structural works, engineering systems, machinery, and factory permits.

We specialize in high-standard industries, including cosmetics, food, pharmaceuticals, dietary supplements, and medical devices. Our systems are designed and installed to comply with GMP requirements in practical and usable.

Backed by a professional team, we focus on quality, standards, and efficient project delivery tailored to each client's needs.

WHY CHOOSE US

WHY CHOOSE US

✔️ Complete service under one roof
✔️ Direct factory-industry experience
✔️ Practical, operation-ready designs
✔️ Quality control at every stage
✔️ Dedicated, hands-on consultation

Vision

To be a leader in factory design, systems engineering, and construction, powered by modern innovation and committed to sustainable growth in Thailand's industrial sector.

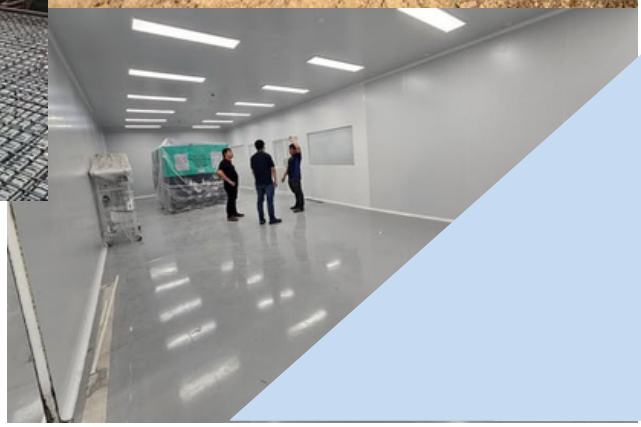

Mission

- Deliver high-quality work that meets established standards.
- Provide comprehensive services tailored to every client need.
- Build confidence through a professional, experienced team.
- Manage schedules and budgets efficiently.

WORK PROCESS

- Site Survey & Consultation
- Design & Project Planning
- Construction & Installation
- System Inspection & Testing
- Ready-for-Use Handover

BOARD OF DIRECTORS

Charoenchai Jaisawang
Managing Director

Nisuda Imsathian
Company Director

Apassara Imsathian
Company Director

Our team brings extensive experience in engineering and industrial factory projects.
We manage every stage, from design through final handover.

OUR SERVICES

01

Factory Design & Construction

Design and construction for all factory types, warehouses, and commercial buildings, in compliance with engineering standards.

02

Machinery

Production machinery, including all types of semi-automatic and automatic systems.

03

Utility Systems

Comprehensive factory utilities, including electrical, water, compressed-air, and infrastructure systems, designed for safety, efficiency, and industrial compliance.

04

Permits & Licensing

Factory regulatory permits and registrations, including building permits, production-facility licenses, and Factory License (Ror.Ngor.4).

05

Quality Standards Consulting

Consulting and implementation of factory standards such as GMP, ensuring compliant and efficient production.

06

Training Services

Training to strengthen factory personnel skills in line with standards and real industrial operations.

FACTORY CHALLENGES

Industrial factory projects involve complex challenges across laws, standards, and project management. Efficient planning and execution require specialized expertise. We recognize the following common factory challenges:

- Complex, time-consuming factory permit processes
- Factory designs that do not comply with GMP
- Utility systems that cannot support actual production
- Cost overruns and difficult project control
- No single expert team overseeing the entire project

THESE PROBLEMS END HERE!

LET PEOPLE LOVE FACTORY TAKE CARE OF YOU

OUR SOLUTIONS

- Comprehensive turnkey design, renovation, and construction of industrial factories, including electrical, HVAC, and cleanroom systems.
- Design, renovate, build, and fit out interiors for buildings, offices, and homes.
- Supply and install Air Showers, Air Locks, and laboratory furniture.
- Design automation systems, line balancing, and line layouts for GMP, HACCP, and ISO certification.
- Factory systems consulting for new builds and renovations.
- Set-up linebalance, Continuous Line, และ Automation line
- Install and maintain safety and security systems, including alarm systems, CCTV, fire alarms, access control, and public-address systems.

OUR STRENGTHS

- Extensive turnkey factory design and construction experience
- One-stop service from design to handover
- Expertise in legal factory permitting
- GMP and cleanroom-ready solutions
- Expertise in production-line machinery installation and layout
- Professional electrical, mechanical, and utility engineers

OUR EXPERIENCE

Our company delivers end-to-end industrial factory design and construction, including production machinery installation and systems integration. We serve the cosmetics, food, pharmaceutical, dietary supplement, and medical-device industries. Our services cover structural works, engineering systems, factory layouts, permits, and GMP-compliant systems, enabling efficient and regulation-ready production.

OVERVIEW

People Love Factory Engineering Group provides end-to-end turnkey services for industrial factory design, systems engineering, construction, and permits - from planning and design to system installation and ready-for-use handover. We also install machinery and production lines in accordance with engineering and GMP standards.

Factory Design & Construction

- Industrial factory design and construction
- Factory layout planning
- Structural and building works

Engineering System & Utility

- Electrical systems
- Mechanical systems
- Utilities (water / air / HVAC / piping)
- Cleanroom / GMP systems

Machine & Production Line

- Machinery installation
- Production-line layout
- Conveyor / automation systems

Factory Permit & Compliance

- Factory permits
- Legal documentation
- GMP / Thai FDA compliance

PRODUCT PORTFOLIO

We handle a wide range of factory projects, including:

- Food and beverage factories
- Cosmetic factories
- General industrial factories

Each design is tailored to the actual operating needs of the business.

PASS BOX

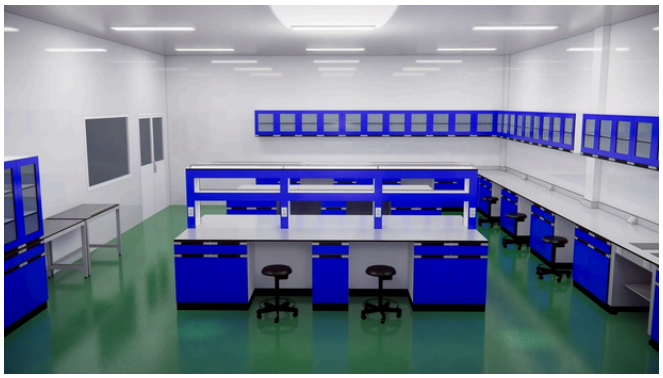

Pass Boxes are essential cleanroom devices used to transfer materials, equipment, or products between areas with different cleanliness levels. They reduce door openings, personnel traffic, and contamination risks.

A Pass Box acts as an airlock, helping prevent dust and microorganisms from entering and maintaining Cleanroom and GMP conditions.

LABORATORY SYSTEM

Laboratory systems are designed and installed for analysis, research, and quality control across various industries. Safety, cleanliness, and environmental control are prioritized to comply with international standards such as GMP and ISO.

CONTROL PANELS

Electrical Control Panels: MDB, DB & Accessories

We design and install main distribution boards (MDB), distribution boards (DB), and system accessories for factory power control and distribution. Each system supports machinery and facility operations safely and efficiently and is tailored to each project.

INDUSTRIAL WASTEWATER TANKS

Industrial wastewater-treatment tanks are designed and installed for process wastewater. They reduce pollution and improve water quality before discharge, with a focus on efficiency, safety, and suitability for each industry.

AIR COMPRESSORS

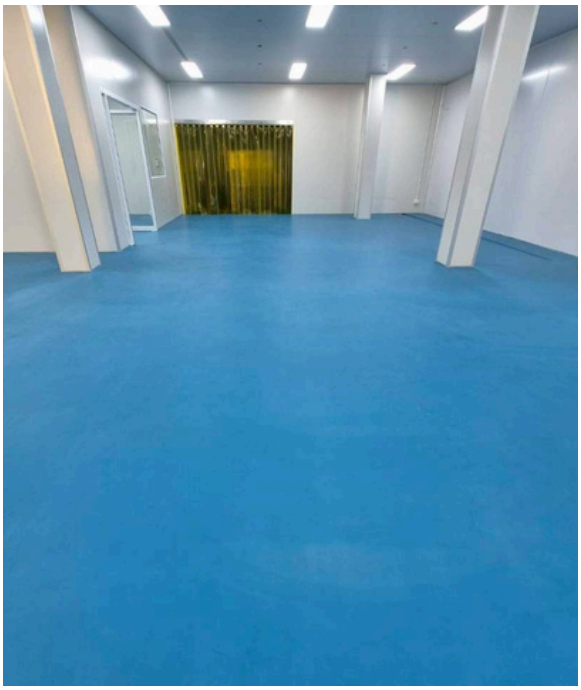

Industrial air-compressor systems are designed and installed to supply compressed air to production machinery and equipment. They support continuous, stable, and efficient operation and are tailored to each factory for reliable long-term use.

EPOXY & PU FLOORING (POLYURETHANE)

Epoxy and PU (polyurethane) flooring is designed and installed for industrial facilities and high-durability areas. It resists chemicals, impact, and heavy use, while providing a smooth, seamless, easy-to-clean surface suitable for GMP-controlled areas.

INDUSTRIAL HVAC & SPOT COOLING

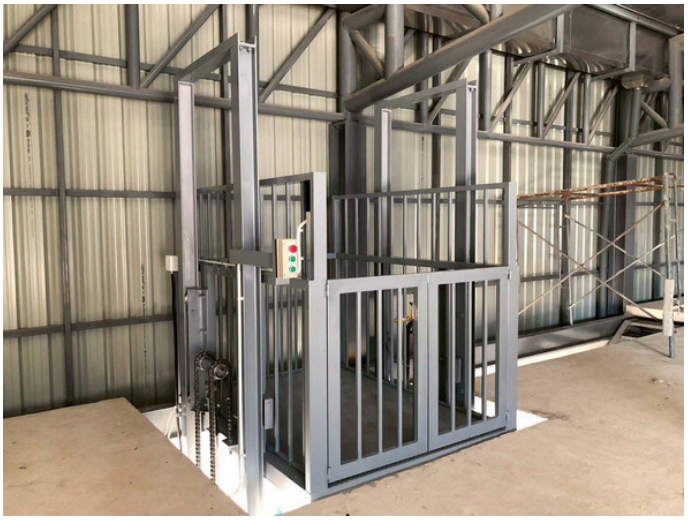

Industrial HVAC and spot-cooling systems are designed and installed to control factory temperatures and working conditions. Localized heat reduction improves machinery and personnel performance while supporting continuous industrial operation.

FREIGHT ELEVATORS

Freight elevators are designed and installed for moving products, raw materials, and equipment between floors in buildings and factories. They improve speed, convenience, and safety, with load and dimensions tailored to each project.

COLD ROOMS

Industrial cold rooms are designed and installed for temperature-controlled storage of products and raw materials. They preserve product quality and shelf life and suit for food, pharmaceutical, chilled, and frozen goods, with designs tailored to applicable requirements.

AIR SHOWER

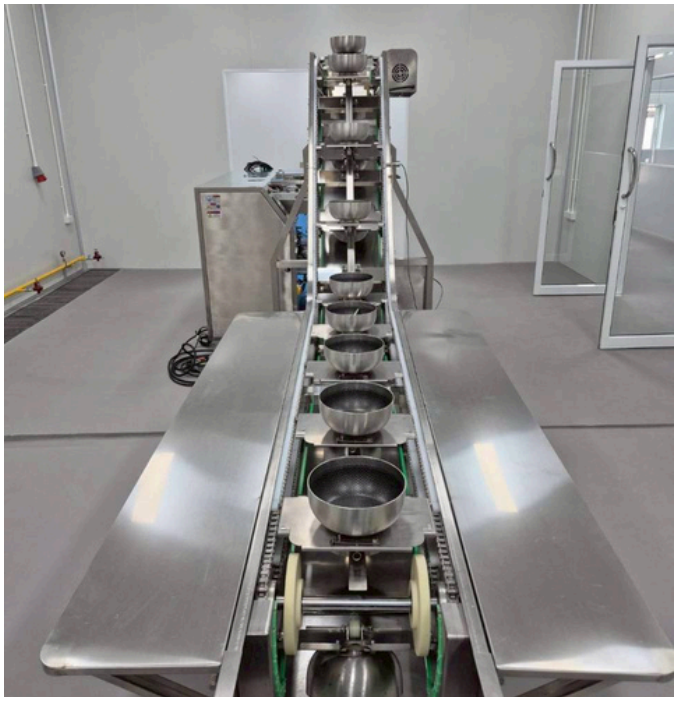

An Air Shower removes dust and contaminants from personnel before they enter a cleanroom. High-pressure air jets clean clothing, reduce contamination, and help production areas maintain GMP cleanliness standards.

MACHINERY

Production machinery and line systems are designed and installed to match each factory's workflow, improving efficiency, continuity, and operational safety. Systems can accommodate additional machinery and equipment based on client requirements.

Food Processing Line

Vertical Packing Machine

MACHINERY

Automatic Bottle Filling Machine

Conveyor Belt

Stainless-Steel Mixing Tank

High-Shear Homogenizer

RO & DI WATER SYSTEMS

RO (Reverse Osmosis) and DI (Deionized Water) systems are designed and installed to produce high-purity water for quality-critical processes in food, cosmetic, pharmaceutical, and laboratory applications.

The systems efficiently remove dissolved solids, minerals, and contaminants. Each system is tailored to factory requirements for consistent water quality and reliable long-term operation.

SOLAR CELL SYSTEMS

Solar-cell systems are designed and installed to generate electricity from sunlight, reducing factory energy costs and improving sustainable energy efficiency. Systems are tailored to each project in on-grid, off-grid, or hybrid configurations.
